growtoo Labs · Raise I · September 2026

Everyone tokenises a promise.
We build the paper trail first.

$200,000 operating raise · $800,000 designed post-money

Journal-first plant RWA platform on Solana · not a token sale

Same two-raise architecture as Jurassic Finance Labs: Raise I funds the operating company; Raise II (first harvest SPV) is a separate vehicle after the legal path exists. This paper is Raise I only.

1. Two raises

Jurassic Finance split the work correctly: Labs first (infrastructure, team, legal), specimen SPV second. growtoo uses that split. The asset is a living plant with a care trail, not a static fossil. The journal is already live. The first harvest SPV is not.

Raise	Amount	What it buys
I · Labs (this paper)	$200,000	12 months, legal entity, Mainnet rails, 30–50
		growers
II · First harvest SPV	Later, separate	Economic rights to a documented batch — after
		counsel

Instrument this round: operating company (SAFE or equity, set by counsel). Not a token sale. Not $GROWTOO. Not harvest title. Designed post-money $800,000 (25% of Labs). Jurassic priced Labs at $400k with no product; growtoo prices higher because the desk and Devnet escrow already run.

2. What we are building

- Log it (live): free journal — watering, feeding, stages, photos, illness check, AI coach, weather, stories. No wallet.

- Seal i
adopt-sta

Why this is not an ICO: a cannabis-adjacent harvest right cannot be sold permissionlessly until an entity and regulatory path exist. $GROWTOO has no monetary value by design. This $200k is cash into Labs so Raise II is even possible.

3. Use of funds — $200,000

Share	USD	Bucket
50%	$100,000	12 months runway. Monthly allowance $8,000 (product, ops, hosting, coach,
		chain fees).
15%	$30,000	Legal: entity, IP, RWA/harvest counsel, future SPV terms.
35%	$70,000	Mainnet rails, stronger attestations, 30–50 growers, 30-day retention, Raise
		II term sheet (not the acquisition).

Spend above $8k/month from runway, or any draw from legal/Mainnet outside the decision log, needs written approval.

4. Why plants

- Evidence is the product. The journal is the funnel; the token is optional.
- Living

5. Map to Jurassic Finance Raise I

	Jurassic Labs	growtoo Labs
Raise I	$200k operating company	$200k operating company
Raise II	First fossil SPV	First harvest SPV after legal
Underlying	Specimen, museum custody	Plant, grower custody, journal trail
On-chain now	Labs ICO; contracts after	Devnet NFTs, escrow — test value only
This round sells	Labs treasury / token	Labs equity or SAFE — not harvest title

6. Upside case

Not a 100x pitch. A real operating company with a free top-of-funnel (journal) and a later origination business (harvest SPVs). Growers keep the majority share under the designed model; adopters enter stage-weighted; Labs takes the market/escrow layer. Five to ten documented batches over two seasons only works if growers actually journal — hence 30-day retention as a Raise I milestone. A lending market against SPV tokens is out of scope until harvest rights are real. We will not copy yield onto a test token.

7. What is already built

Capability	Status
PWA journal, camera, illness check, AI coach, stories	Live
Firebase Auth, public journal, Terms / Privacy / Risks	Live
Phantom / Solflare / watch-only link	Live
Stage mint, seed NFTs, adopt-stake, on-chain escrow	Solana Devnet
$GROWTOO	Test asset — no monetary value
Physical harvest redemption	Specified, mocked
Legal entity, Mainnet money, trustless attestation	This raise

Check: growto.live · growto.live/rwa-docs · growto.live/risks · chain/deployed.devnet.json. SuperteamBLKN collaboration is underway. This paper does not claim a Foundation grant or unpublished waitlist numbers.

8. 12-month roadmap

When	What ships
Now	Journal, coach, Devnet seal / market.
Q4 2026	Legal entity. Regulatory memo. Stronger attestations.
H1 2027	Scoped Mainnet pilot. 30–50 growers. 30-day retention. Raise II term sheet.
Later	Raise II first harvest SPV — not funded here.

The 14-day / 50% care listing rule already runs on Devnet. It is process evidence, not proof a physical plant exists.

9. Team

Bela Ikotic — product and engineering. Journal-first product, evidence model, AI coach. Testing with early growers. bela.ikotic@gmail.com · admin@growto.live. Single-operator Labs today. Raise I pays that operator and counsel, not a 12-person team. A second hire comes from the $8k monthly allowance or a written overage.

10. Operating rules

- Monthly allowance $8,000 from the runway bucket.

- Harve

11. Designed Labs economics (not live)

Line	Figure
Cash this round	$200,000
Post-money (Labs)	$800,000
Investor share of Labs	25%
Founder / operator	75% at close, subject to counsel
$GROWTOO	Devnet test asset, no value
First harvest token	Raise II only

There is no live ICO and no implied FDV on a ticker. A MetaDAO-style supply table will be published only if that mechanism is actually used — not before an entity exists.

12. Risks

- Single operator and a single Devnet collection authority today.

- Journ

13. Close

Jurassic Finance proved that a $200k Labs raise can be told as: build the desk, then buy the specimen. growtoo is the same sentence with the specimen still in the ground: build the trail, then sell the harvest — and only if the law allows. The journal is live. The chain is optional and already testable. The $200k is to make the second raise honest.
