

growtoo use of funds — cost catalog

Where Raise I cash goes · 4 September 2026 · internal, not a priced round

Planning numbers in USD. Canonical fill is the Labs paper: **50% runway (\$8k/mo)**, 15% legal, 35% Mainnet + growers. Not a Futard form, not a founder employment contract, not investment advice.

Contents

1. 1. Three envelopes

2. 2. Recommended split if \$200k fills (envelope B)

3. 3. What \$8,000 / month is (and is not)

4. 4. Envelope A (\$80k) and C (\$250k)
5. 5. Catalog of possible costs

6. 6. growtoo.com

7. 7. Where money should not go

8. 8. Year-one picture (envelope B, \$200k)

9. 9. Decision log (use this when spending)

1. Three envelopes

Futard is all-or-nothing on the **floor**. Plan spend for the floor you set. Take \$200–250k only if the book oversubscribes.

Envelope	Cash in	Role	Months of \$8k runway
A · Floor	\$80,000	Honest Futard minimum (see Futard scan). Survive 12 months thinner.	12 × \$5,000 (or 10 × \$8k and a shorter year)
B · Fill	\$200,000	Canonical Labs paper. Same shape as Jurassic Raise I.	12 × \$8,000 = \$96k, plus legal + Mainnet buckets
C · Stretch	\$250,000	Only if named wallets are already in the book. Extra \$50k is not a second salary.	Same \$8k/mo; extra goes to counsel, audit, domain, design

Do not invent a fourth envelope that pays a \$14k/mo team on an \$80k floor. GameByts asked **\$14,000/mo** on a **\$250k** raise and still refunded.

2. Recommended split if \$200k fills (envelope B)

Same 50 / 15 / 35 as the Labs paper. Legal and Mainnet are **separate buckets**. They are not paid from the monthly cap.

Share	USD	Bucket	What it is for
50%	\$100,000	Runway	12 months operations. Monthly allowance \$8,000 . Product, founder draw, contractors, hosting, coach, chain fees, small marketing.
15%	\$30,000	Legal	Entity, IP assignment into Labs, cannabis/RWA memo, future SPV terms, Futard B1 / Cayman SPC if you launch there. Heavier than a collectible because cultivation rules differ by jurisdiction.
35%	\$70,000	Mainnet + cohort	Scoped Mainnet pilot (audit, deploy, SOL, attestations), 30–50 real growers, 30-day retention work, Raise II term sheet — not buying a harvest.

Rule: spend above \$8k in a month from runway, or any legal/Mainnet draw outside a written decision log, needs approval (raise lead now; futarchy later if a DAO wrapper exists).

\$8k × 12 = \$96,000. The extra \$4,000 in the \$100k runway line is a buffer (FX, one overage month, tax reserve). Do not treat it as a 13th salary.

3. What \$8,000 / month is (and is not)

On Futard this number is the **on-chain spending cap**: team may draw this much from the treasury without a new proposal. It is **not** “founder salary = \$8k” plus a team on top.

Launch	Monthly cap	Notes
growtoo (designed)	\$8,000	Conservative vs the board. Single operator + thin contractors.
GameByts	\$14,000	Marketing, team, infra, anti-fraud, marketplace. Still missed a \$250k floor.
Solar (same board)	\$14,000	Same \$14k template many launches copy.
Manna / similar	\$10–14k	Same band cited in the Futard scan.

Copying \$14k because “others ask it” is how you empty a \$80–100k floor in seven months. Stay at **\$8k** unless the book is Jurassic-class and you have a second named operator.

Inside the \$8k — recommended month (envelope B)

Founder is also the engineer. Draw is pay for shipping, not a silent extra headcount.

Line	/ month	/ year	Notes
Founder draw	\$4,000	\$48,000	Product + engineering + ops. CEE/HR-realistic; below a US founder salary on purpose so the cap still funds the desk.
Contract design / UI	\$800	\$9,600	Averaged. Some months \$0, a landing/Futard page month \$2–3k.
Marketing / community	\$1,200	\$14,400	Not paid ads as the thesis. AMA, English Futard page, one share-object plant, MetaDAO time. Community agent is already built.
Infra (see §5)	\$400	\$4,800	Firebase, Gemini, RPC, Netlify, weather, mail.
Buffer / tools / contractors	\$1,600	\$19,200	Extra eng week, accountant, translations, unexpected SOL.
Total	\$8,000	\$96,000	Must fit the cap.

If you hire a second person, their pay **replaces** buffer + part of founder draw or design — it does not sit on top of \$8k.

Founder draw — what “like others” actually means

Style	Monthly to founder	Honest read
Recommended	\$4,000 inside \$8k cap	Operator can live; desk still has \$4k for work.
Lean floor (envelope A)	\$2,500–3,000	12 months on \$80k only works if founder draw drops.
“US founder”	\$8,000+	Then the cap is salary and there is no product budget. Do not do this.
GameByts-shaped	\$14,000 team	Wrong floor. Do not copy.

Founder draw is contractor compensation for work, not a dividend on a Futard token. Futard B1 does not create a salary entitlement; the cap is a **maximum**, not a paycheck.

4. Envelope A (\$80k) and C (\$250k)

A · \$80,000 floor — survive, don't Mainnet

Bucket	USD	Notes
Runway 12 × \$5,000	\$60,000	Founder \$3k + infra \$400 + \$1.6k everything else. Design and marketing almost all founder time.
Legal (thin)	\$12,000	Entity + basic ToS/privacy refresh. Not a full harvest memo.
Domain / design / Futard page	\$8,000	growtoo.com or a proper Futard page + brand, not both unless the domain is cheaper than budgeted.
Mainnet	\$0 from this envelope	Stays Devnet. Paying audit out of \$80k starves the year.

C · extra \$50k if \$250k is taken

Line	USD	Why
Program audit (escrow)	\$15,000–25,000	Real money on Mainnet needs this before listings.
growtoo.com	\$7,500	See §6. One-time.
Design (Futard page + app polish)	\$8,000	External, not founder evenings.
Counsel overage (cannabis memo)	\$10,000	On top of the 15% legal bucket if \$200k already filled.
Grower cohort ops	\$5,000–10,000	Travel, devices, not paid user-count ads.

Anything left stays in treasury under the \$8k cap. Do not raise the monthly cap to \$14k just because \$250k landed.

5. Catalog of possible costs

Not every line is funded in every envelope. **Must** = needed for a honest 12-month Labs. **If raise** = only if that envelope exists. **Later** = Raise II / Mainnet, not this round's job.

5.1 Brand and domains

Item	Typical	When	Notes
growto.live renewal	\$50–150 / yr	Must	Already live. Keep it.
DNS / email / SSL	\$100–300 / yr	Must	Workspace or equivalent.
growtoo.com	\$4,500–8,000 one-time	If raise	You saw ~ \$7,500 . A public Atom.com listing also showed \$4,399 . Budget \$7,500 ; negotiate. Do not spend envelope A's last dollars on a .com if the Futard page is not done.
Other TLDs (growtoo.io, etc.)	\$20–80 / yr	Optional	Defensive, not the product.
Trademark (selected classes)	\$1,500–4,000	If raise	After entity exists. Cannabis classes are messy — counsel.

growtoo.com is a **nice brand**, not a listing gate. Journal works on growto.live. Buy .com from the stretch or the \$4k runway buffer, not from legal.

5.2 People (dev, design, founder)

Item	Typical	When	Notes
Founder draw	\$3–4k / mo	Must	See §3.
Extra engineer (contractor)	\$4–8k / mo full-time equiv.	Only if cap allows	A rewrite hire is the \$8k. Then founder draw must drop or the month overages.
Design (brand + Futard one-pager + a few app screens)	\$5–12k project	If raise	Sage paper already exists. Pay for the Futard English page and Simple/Advanced honesty, not a new visual identity.
Native iOS/Android	\$40k+	Out of scope	Product spec: web only.
Community drafts	mostly time	Must	community-agent/ already exists. Don't buy a social agency.

Old internal quotes (docs/TROSKOVNIK_MJ1_MJ2_8k.md €8k for two months; docs/PONUUDA_ROADMAP_6M_18k.md €18k for six) were **client project quotes**, not this Labs raise. Do not mix EUR agency packages into the \$200k Futard story without converting and saying they are historical.

5.3 Product / engineering (one-time from 35% or buffer)

Item	Typical	When	Notes
Keep vanilla JS, split the 9k-line app.js	\$0–15k of founder time	Default	Rebuild packet: chain workers can stay.
Typed SPA rewrite	\$40–80k	Only if 35% + extra eng	Eats Mainnet. Don't rewrite and Mainnet in the same \$70k.
WeatherAPI off the client	days, not a line	Must soon	Security, not a vendor event.
Gemini / coach	usage, ~\$50–300 / mo at this scale	Must	Already in infra.
Solana RPC (Helius/QuickNode)	\$50–200 / mo	Must	Already proxied.

5.4 Infra (inside \$400/mo)

Item	Typical / mo	Notes
Firebase (Auth, Firestore, Storage, Functions)	\$50–150	Blaze. Grows with photos.
Netlify	\$0–20	Static.
Gemini API	\$20–100	Quotas already 60 + 25/day.
WeatherAPI	\$0–20	Move server-side.
Email (Auth + Workspace)	\$7–15 / seat	
Error tracking (Sentry)	\$0–26	
Domain / DNS	~\$10 averaged	
Solana fees / Devnet	~\$0	Mainnet fees belong in the 35% bucket.

Plan **\$400/mo**. If photos explode, it comes from buffer, not a silent overage.

5.5 Legal and entity

Item	Typical	When	Notes
Operating company (HR/EU or US)	\$1–5k	Must if \$200k	Where the founder actually lives and invoices.
Cayman SPC / MetaLeX B1 (Futard standard)	\$8–20k+	If Futard	Platform-shaped wrapper. Token is still not equity .
IP assignment (code, mark → Labs)	\$1–3k	Must if \$200k	Labs paper already says this.
Terms / Privacy / Risks refresh	\$1–3k	Must	Pages exist; harvest language must stay mocked.
Cannabis / RWA regulatory memo	\$8–20k	15% bucket	Why legal is 15% not 8%.
Harvest SPV docs	\$15k+	Raise II	Not this raise.

5.6 Chain / Mainnet (35% bucket)

Item	Typical	When	Notes
Anchor program audit	\$15–40k	Before real USDC listings	Don't list on Mainnet without it.
Deploy / key ceremony / kill-switch	\$2–8k	With audit	Ops, not a slide.
Mainnet SOL + priority fees	\$1–5k	Pilot	Small if listings are few.
Attestation hardening	founder + \$5–15k	35%	Coverage gate is process evidence until this.
Traffic-sim off production	\$0	Must	Don't demo HiveBits/growtoo with TrafficMint_ ids.

5.7 Marketing and distribution

Item	Typical	When	Notes
Futard English page	\$1–3k design + copy	If Futard	Buyers do not read growto.live sage marketing.
MetaDAO / cult time	founder hours	If Futard	Two weeks before T0. This is the real “marketing.”
One share-object plant (21 care days, listed, adopted)	time + maybe \$200 travel	If Futard	Mechanism, not a user-count brag.
Paid ads (Google/Meta)	\$1–5k / mo	Usually no	Wrong room; burns the cap.
Influencers / cannabis Twitter	variable	No as thesis	Wrong board.
Conference / Superteam	\$500–2k	Optional	Fine from buffer.

5.8 Grower cohort (35% and ops)

Item	Typical	When	Notes
30–50 real journals	time, not bounties that fake logs	35%	Public slugs. No synthetic traffic as the demo.
Devices / travel to growers	\$1–5k	If raise	Optional.
Paying growers to log	dangerous	Avoid	Buys fake createdAt farms. Coverage math is the product.

6. growtoo.com

Source	Price	Use
Your read	~\$7,500	Planning line in this doc
Public Atom.com listing (retrieved Sep 2026)	\$4,399	Negotiate toward this; don’t assume it is still the ask
Budget in envelope C or \$200k buffer	\$7,500	If both quotes are gone, skip until stretch

Buy it when: envelope B or C exists **and** the Futard page + legal wrapper are funded. **Do not buy it when:** you are on envelope A and choosing between .com and 10 extra weeks of runway.

Redirect growtoo.com → growto.live (or the reverse after a careful cutover). Keep growto.live in Terms until the cutover is done.

7. Where money should not go

- Native store apps.
- A second visual identity.
- Paid user acquisition as the Futard thesis.
- LP / yield / buyback as a use-of-funds slide (Futard already has the machine; B1 forbids a dividend reading).
- Harvest inventory, shipping, warehouse.
- Inflating the monthly cap to \$14k "because GameByts did."
- Founder draw **plus** a full-time engineer **plus** \$8k cap.
- Publishing mint counts or waitlists that are not in product-facts.md.

8. Year-one picture (envelope B, \$200k)

| | USD |

| -- | ----- |

| Founder draw | \$48,000 |

| Design (averaged) | \$9,600 |

| Marketing / community | \$14,400 |

| Infra | \$4,800 |

| Buffer / extra contractors | \$19,200 |

| **Runway subtotal** | **\$96,000** |

| Runway reserve | \$4,000 |

| Legal bucket | \$30,000 |

| Mainnet + cohort bucket | \$70,000 |

| **Total** | **\$200,000** |

Optional pulls **from reserve / stretch / leftover Mainnet**, not new percentages:

- growtoo.com ~\$7,500
- Extra design sprint ~\$8,000
- Audit if Mainnet listings go live ~\$15–25,000

If those optionals fire in year one, they **reduce** Mainnet scope or the reserve. They do not raise the \$8k cap.

9. Decision log (use this when spending)

For any draw: date, envelope (A/B/C), bucket (runway / legal / Mainnet), amount, purpose, who approved.
Monthly runway invoices (founder + vendors) should sum to $\leq$ cap.

If a Futard DAO exists later, over-cap spends are futarchy proposals — same as GameByts' disclosed rule.

Generated from docs/COSTS.md on 4 Sep 2026. Legal and harvest lines need counsel. Domain ask is a snapshot, not a bid.
